CLARITY . CONTROL . CONFIDENCE

RUDRA-X | CARRY-ON JOB AIDS | 2026

AI Practice Assurance Desk Reference

Checklists and templates for everyday AI use

Keep this at your desk

FOR YOUR DAILY USE

Licensed for internal use by: [Firm name]

You may keep, print and use these job aids inside your firm.

Please do not share them outside the firm. Training content remains on the platform.

1. Verify before you rely

Never ask the AI to verify itself. Check the primary source.

Check	What to confirm	Done
1. Existence	Every case, statute, rule and regulation exists, found in an authoritative source.	☐
2. Accuracy	Every quotation matches the source word for word; every pinpoint is right.	☐
3. Proposition	The source actually supports the point it is cited for.	☐
4. Currency	It is still good law: citator checked; statute current; right jurisdiction.	☐
5. Facts and figures	Dates, deadlines, numbers and factual statements checked against the record.	☐

Review tiers

Tier 1: Internal working material	Notes, brainstorming, internal summaries not relied on externally. The author checks before reuse.
Tier 2: Client-facing advice	Advice, letters, contract drafts, anything a client or counterparty will rely on. Full five checks by the author plus supervising lawyer sign-off.
Tier 3: Court, tribunal and regulator filings; opinions	Full five checks, documented cite-check, personal confirmation by the signing lawyer, and AI disclosure where the forum requires it.

Red flags of fabricated authority

Too perfect	A case that fits your argument exactly, with a quotation that reads like your own brief.
Can't be found	Not in your research database, or the citation leads to a different case.
Odd details	Reporter volumes or pages that don't fit the year; courts that don't exist; mismatched party names.
No pinpoint or a vague one	A holding with no page reference, or a quotation you can't locate in the opinion.

2. Prompt builder

Ground the model. Ask for both sides. Permit 'I don't know'.

1. Role	Who the AI should act as: 'an associate drafting for a supervising partner'.
2. Task	One clear deliverable: summarise, compare, draft, list.
3. Jurisdiction and date	Which law applies, and as of when.
4. Sources	The documents it must rely on, pasted or attached.
5. Constraints	'Use only the sources provided. Say if you are unsure. Do not invent citations.'
6. Output format	Table, numbered list, or memo with pinpoint references.

Fill-in template

```
ROLE: You are [role] preparing [deliverable] for [reader].
TASK: [one clear task].
JURISDICTION AND DATE: Apply [state/federal] law as in force on [date]. Flag anything that
may have changed.
SOURCES: Use ONLY the attached [documents]. Give a pinpoint (page/paragraph/section) for
every point.
CONSTRAINTS: Include points for AND against. If the sources do not answer a point, say 'not
addressed'.
Do not cite anything that is not attached. 'I don't know' is an acceptable answer.
FORMAT: [table with columns ... / numbered list / short memo].
```

Techniques that reduce errors

Ask both sides	'Give the strongest authority for AND against this position.'
Permit uncertainty	'If you are not sure, say so. "I don't know" is an acceptable answer.'
Break it down	One step per prompt: facts, then issues, then analysis, then draft.
Self-critique pass	'Review your answer. List any statement not supported by the attached sources.'
Fix the date	'Apply the law as in force on [date]. Flag anything that may have changed.'
Ask for gaps	'What information would you need to answer this reliably?'

A self-critique pass helps find problems. It is never verification.

3. Review record

Complete at the time of review for every tier 2 and tier 3 output.

Matter number / client	
Document and version reviewed	
AI tool and plan (enterprise / consumer)	
Date of AI use	
Review tier (1 / 2 / 3)	
Reviewer name and role	
Supervising / signing lawyer (tiers 2-3)	
Date and time of review (system timestamp ref.)	

Checks performed

☐ Existence	☐ Accuracy of quotes and pinpoints	☐ Proposition supported
☐ Currency (citator, current statute)	☐ Facts, dates and figures	☐ AI disclosure where required

Sources used for verification

Issues found and corrected before reliance

Any edit after this review needs its own review before the work is relied on. Re-using this output on another matter, or after the facts or law change, needs a fresh review.

4. What can go into which tool

Classify before you paste. Minimise and anonymise by default.

Green: public or fully anonymised	Published law, public filings, text with all identifying details removed. Any approved tool.
Amber: client confidential	Client facts, contracts, correspondence. Only firm-approved enterprise tools with confirmed no-training terms, and only what the task needs.
Red: never without specific approval	Privileged strategy, health and financial records, sealed or protected material, data under a protective order, anything a client has restricted. Needs Governance Lead approval and, for self-learning tools, informed client consent.

Six questions about any tool's data terms

Is it an enterprise or consumer plan?	Consumer plans often have weaker confidentiality and retention terms
Are inputs used to train models?	Training use risks client data surfacing in later outputs
How long are inputs and outputs kept?	Retention affects both confidentiality and your ability to produce logs
Who at the vendor can access data?	Human review of inputs is a disclosure risk
Where is data stored and processed?	Some clients and matters restrict data location
Can logs be exported?	You may need them to prove what happened

Minimise and anonymise

Replace identifiers	Use 'Client A', 'Company B', 'the Property' instead of names, addresses and account numbers.
Send only what's needed	Paste the relevant clause, not the whole data room.
Check what you upload	Metadata, tracked changes and hidden comments travel with documents.

Before client confidential information goes into a self-learning tool, the client must give informed consent (ABA Formal Opinion 512). Boilerplate in an engagement letter is not enough.

5. Before you rely: the nine questions

#	Ask	Yes
1	Is this tool approved by the firm for this task?	☐
2	Did any client or privileged data go in, and was that allowed?	☐
3	Was the prompt grounded in the actual sources?	☐
4	Have all five checks been done against primary sources?	☐
5	Is the law current and the jurisdiction right?	☐
6	Have I applied my own professional judgment to the result?	☐
7	Has the right review tier been completed and recorded?	☐
8	Is AI use disclosed where a court, client or engagement letter requires it?	☐
9	Am I billing actual time only?	☐

If any answer is 'no' or 'not sure', stop and fix it before the work goes out.

When to escalate

To your supervising lawyer	You can't verify a source; the AI answer conflicts with your understanding; a deadline is tight and review would be rushed.
To the AI Governance Lead	You want to use an unapproved tool; red data is involved; you suspect a tool is producing a pattern of errors.
Immediately	You discover an error in work already sent, filed or relied on. See Module 9.

6. Found an AI error?

Speed and candor. Never double down.

1	**Stop and contain**	Halt further use of the output; pull any pending filings or sends.
2	**Report internally**	Tell the AI Governance Lead within two business days, sooner if a deadline is live.
3	**Preserve evidence**	Legal hold on logs, versions, review records; ask the vendor to preserve.
4	**Correct the record**	Inform the client, and the court or tribunal where required, and fix the error.
5	**Notify insurers**	Report the circumstance to your professional liability insurer(s) promptly.
6	**Learn**	Log the incident, find the root cause, update training and controls.

Do not

Admit liability, offer payment or agree a settlement without your insurer's consent. Do not create or edit review records after the event.

Incident log entry

Matter and output	
Tool	
Error	
Actions	
Notifications	
Root cause and fix	

7. For the AI Governance Lead

Firm-level controls checklist

Component	In place when	✓
Governance Lead	A named partner with authority	☐
AI Use Policy	Approved, restricted, prohibited uses	☐
Tool register	Every AI tool, task and data rule	☐
Review protocol	Tiers, five checks, records	☐
Logging and retention	Prompts, outputs, versions kept	☐
Training	On joining and annually, recorded	☐
Agentic AI gate	Human approval before action	☐
Vendor diligence	Terms, caps, notice periods	☐
Rules and disclosure	Court orders, client terms	☐
Incident process	Log, escalate, correct, notify	☐

Records to make sure exist

Tool details	Tool, vendor, model and version, plan, settings, date of use
Prompt and response log	Timestamped, as generated
All versions	Raw output, every edit, final version relied on
Review record	Who, when, which version, what was checked
Reliance record	What was filed or sent, to whom, when
Governance in force	Policy, protocol, tool list and training records at the time

Logging on | auto-delete off | retain at least six years after matter closes | legal hold within days of any complaint.
